SUMMARY

Results-driven Python Backend Engineer with 2+ years of experience building enterprise-grade security automation platforms at scale. Proven expertise in architecting microservices (Django + SvelteKit) and orchestrating security pipelines (Celery, Kubernetes). Skilled in combining deep Python expertise with emerging Generative AI frameworks (LangGraph, LLM agents) to automate complex analysis workflows.

EDUCATION

Bannari Amman Institute of Technology, Erode, Tamil Nadu
Bachelor of Engineering in Electrical and Electronics Engineering

2019-2023
8.56 CGPA

SKILLS

- **Languages:** Python (Advanced), SQL, TypeScript, JavaScript, Bash
- **Backend & Architecture:** Django, Django REST Framework, FastAPI, Microservices, RESTful APIs, Celery, Redis, Gunicorn
- **Generative AI:** LangGraph, LLM Agents, Stateful Reasoning, RAG Pipelines, Prompt Engineering
- **DevOps & Infrastructure:** Docker (multi-stage), Kubernetes (K3s), KEDA Auto-scaling, Jenkins CI/CD, GitOps, Nginx, MinIO (S3), Linux
- **Security & Compliance:** JFrog Xray, Fortify, WhiteSource/Mend, CVE Analysis, SBOM, RBAC,
- **Tools:** Git, Jira, Metabase, n8n, Flower, OpenAPI (drf-spectacular), Pandas, NumPy

PROFESSIONAL EXPERIENCE

Associate Product Engineer | Temenos | Chennai

May, 2023 - Present.

Key Achievement: Product Security Assessment (PSA) Portal Architected and launched an enterprise security governance platform utilized across 8 global product verticals, establishing a unified source of truth for product security.

- **Architecture & Scale:** Developed a full-stack platform (Django + SvelteKit) featuring 85+ REST APIs, 35+ database models, and 11+ containerized services deployed on a K3s Kubernetes cluster with GitOps-based declarative manifests.
- **Workflow Automation:** Engineered 20+ asynchronous Celery pipelines with Redis and gevent worker pools, processing 270,000+ CVE records from the NVD database with near-real-time synchronization and zero manual intervention.
- **Integration Ecosystem:** Integrated 14 disparate enterprise systems (JFrog, Fortify, Mend, Jira, Azure AD, etc.), significantly reducing cross-tool integration latency and centralizing fragmented data.
- **AI & Incident Response:** Developed a stateful reasoning engine using Python and LangGraph to automate root-cause analysis for security incidents, successfully reducing MTTR from hours to minutes.
- **Performance & Security:** Designed on-demand security scanning orchestration (OSL, SAST) utilizing KEDA auto-scaling for high-resource compute tasks, and implemented robust RBAC with Azure AD SSO integration.

INDEPENDENT PROJECT

- **[AI Powered Vulnerable Method Finder:](#)**
Python-based tool that automates the analysis of Common Vulnerabilities and Exposures (CVEs) to identify the likely vulnerable software package, class, and method/function.
